

What if you are already multi-tenant?

While our patent-pending [Virtual Multi-Tenancy \(VMT\)](#) technology is a powerful solution for single-tenant applications, it is but one of an extensive list of features in the **Wrapped Apps** Service Delivery Platform (**SDP**).

ISVs who have already deployed a multi-tenant application must still address a host of business and operational challenges, and our **SDP** faces these challenges head-on; making it the only choice for SaaS enablement.

SOA

- some SOA companies offer certain features
- not multi-tenancy
- customized solutions - more expensive

Wrapped Apps Service Delivery Platform
